

Introduction-A new product to overcome battery power anxiety

"Power anxiety" is prevalent throughout society nowadays. It means that you always worry about the low power of your electronic devices. Among these, the smartphone is the most significant source of your "power anxiety" based on research by Leo in March 2026.

To relieve the "power anxiety" of smartphones, people have no choice but to bring a cellphone charger. The inconvenience is that not only does it make your bag heavier, but it will also be hard to find an electricity resource in many circumstances.

Recently, someone invented portable chargers which you can rent, but they are another burden in your bag.

To help people avoid low power conditions of smartphones in their daily life, I have invented a "removable battery" for smartphones. This means that when your phone is at low power, you remove the battery and exchange it for a new one. Then your phone immediately gets 'fully charged'. Also, you can just charge the battery, which means that every night you charge your battery: when you go out in the morning, you pick a 100% charged one, and when you get back in the evening, you exchange it for another one immediately and charge the battery you removed.

What is the benefit of this product and the workflow I showed before?

When you use the "removable battery", each time you leave your home, you just pick up your phone. It is enough; you do not need anything else like your charger, cables, portable charger, and so on. It really reduces your burden of going out. It totally kills the power anxiety of low power smartphones. You will never need to worry about finding a power supply.

The "removable battery" is not just easy to use; it is a fundamental change in how we use phones. It helps our mental well-being because we will not suffer from power anxiety anymore. It also helps the Earth because if the battery is worn out, people often have to buy a new phone. This creates a lot of waste. But with this new battery, we only change the small part, and the phone can last for a long time. Hence, beyond relieving our anxiety, the removable battery can also protect our environment.
